WEB DEVELOPMENT PROJECT REPORT

Activity-Based Learning: Website Design Using HTML and CSS

Projects included

1. ShopEasy — Online Shopping Website
2. City Care Hospital — Healthcare Services Website
3. FitLife Gym — Fitness Center Website

This report includes project descriptions, objectives, key features, technologies used, and the supporting screenshots in the following pages.

1. Introduction

This report documents three sample website projects created as part of a web development activity. Each project demonstrates how HTML can structure a website and CSS can style its layout, colors, spacing, navigation, cards, tables, and forms. The screenshots attached after the written report show the visible pages and sections of the websites.

Objectives

- Build clear, organized web pages using semantic HTML elements.
- Apply CSS to create consistent colors, typography, spacing, navigation bars, and content sections.
- Present information in cards, tables, lists, and forms where appropriate.
- Practice designing websites for different purposes and audiences.
- Document the completed work using screenshots in a consolidated PDF.

Technologies Used

HTML: Used to organize page content, headings, navigation links, lists, tables, and forms.
CSS: Used to define colors, backgrounds, alignment, spacing, typography, card layouts, and button styles.
Web browser: Used to open and test the local HTML pages and view the rendered designs.

2. Project One: ShopEasy Online Shopping Website

ShopEasy is a sample online shopping website designed to introduce visitors to product categories, featured products, special offers, and a contact form. Its dark-blue header and navigation bar provide a clear identity, while the light background and white product cards help separate content into readable sections.

Main Features

- Header area with the ShopEasy name and a short tagline.
- Navigation links for Home, Categories, Products, Offers, and Contact.
- Welcome section with a “Shop Now” call-to-action button.
- Product category cards for Electronics, Fashion, and Home Appliances.
- Featured product cards with names, descriptions, prices, ratings, and “Buy Now” buttons.
- Special-offer information and a contact form for visitors.

Purpose and Learning Outcome

This project demonstrates how a storefront landing page can group products and promotional information into sections. It also provides practice with card-based layouts, button styling, navigation, and form fields.

Supporting screenshots: the ShopEasy pages appear in the screenshot section of this report.

3. Project Two: City Care Hospital Website

City Care Hospital is a sample healthcare services website that presents hospital information in a structured, easy-to-navigate format. It introduces the hospital, describes departments and doctors, lists facilities and visiting hours, and provides an appointment request form.

Main Features

- Hospital header, tagline, emergency-services message, and navigation menu.
- Welcome section with a “Book an Appointment” call-to-action.
- About section describing the hospital's service goals.
- Department cards for Cardiology, Neurology, Pediatrics, and Orthopedics.
- Doctor cards showing names, specialties, and years of experience.
- Facilities list, visiting-hours information, and an appointment form.
- Contact section with address, phone number, and email information.

Purpose and Learning Outcome

This project demonstrates organizing service information into clearly labeled sections. It provides practice with navigation, multi-column cards, lists, and form controls for collecting appointment requests. The displayed contact details and doctor information are sample website content.

4. Project Three: FitLife Gym Website

FitLife Gym is a sample fitness-center website intended to introduce workout programs, trainers, class schedules, membership plans, and registration details. The red, black, and light-pink color palette helps distinguish the header, navigation, content, and contact sections.

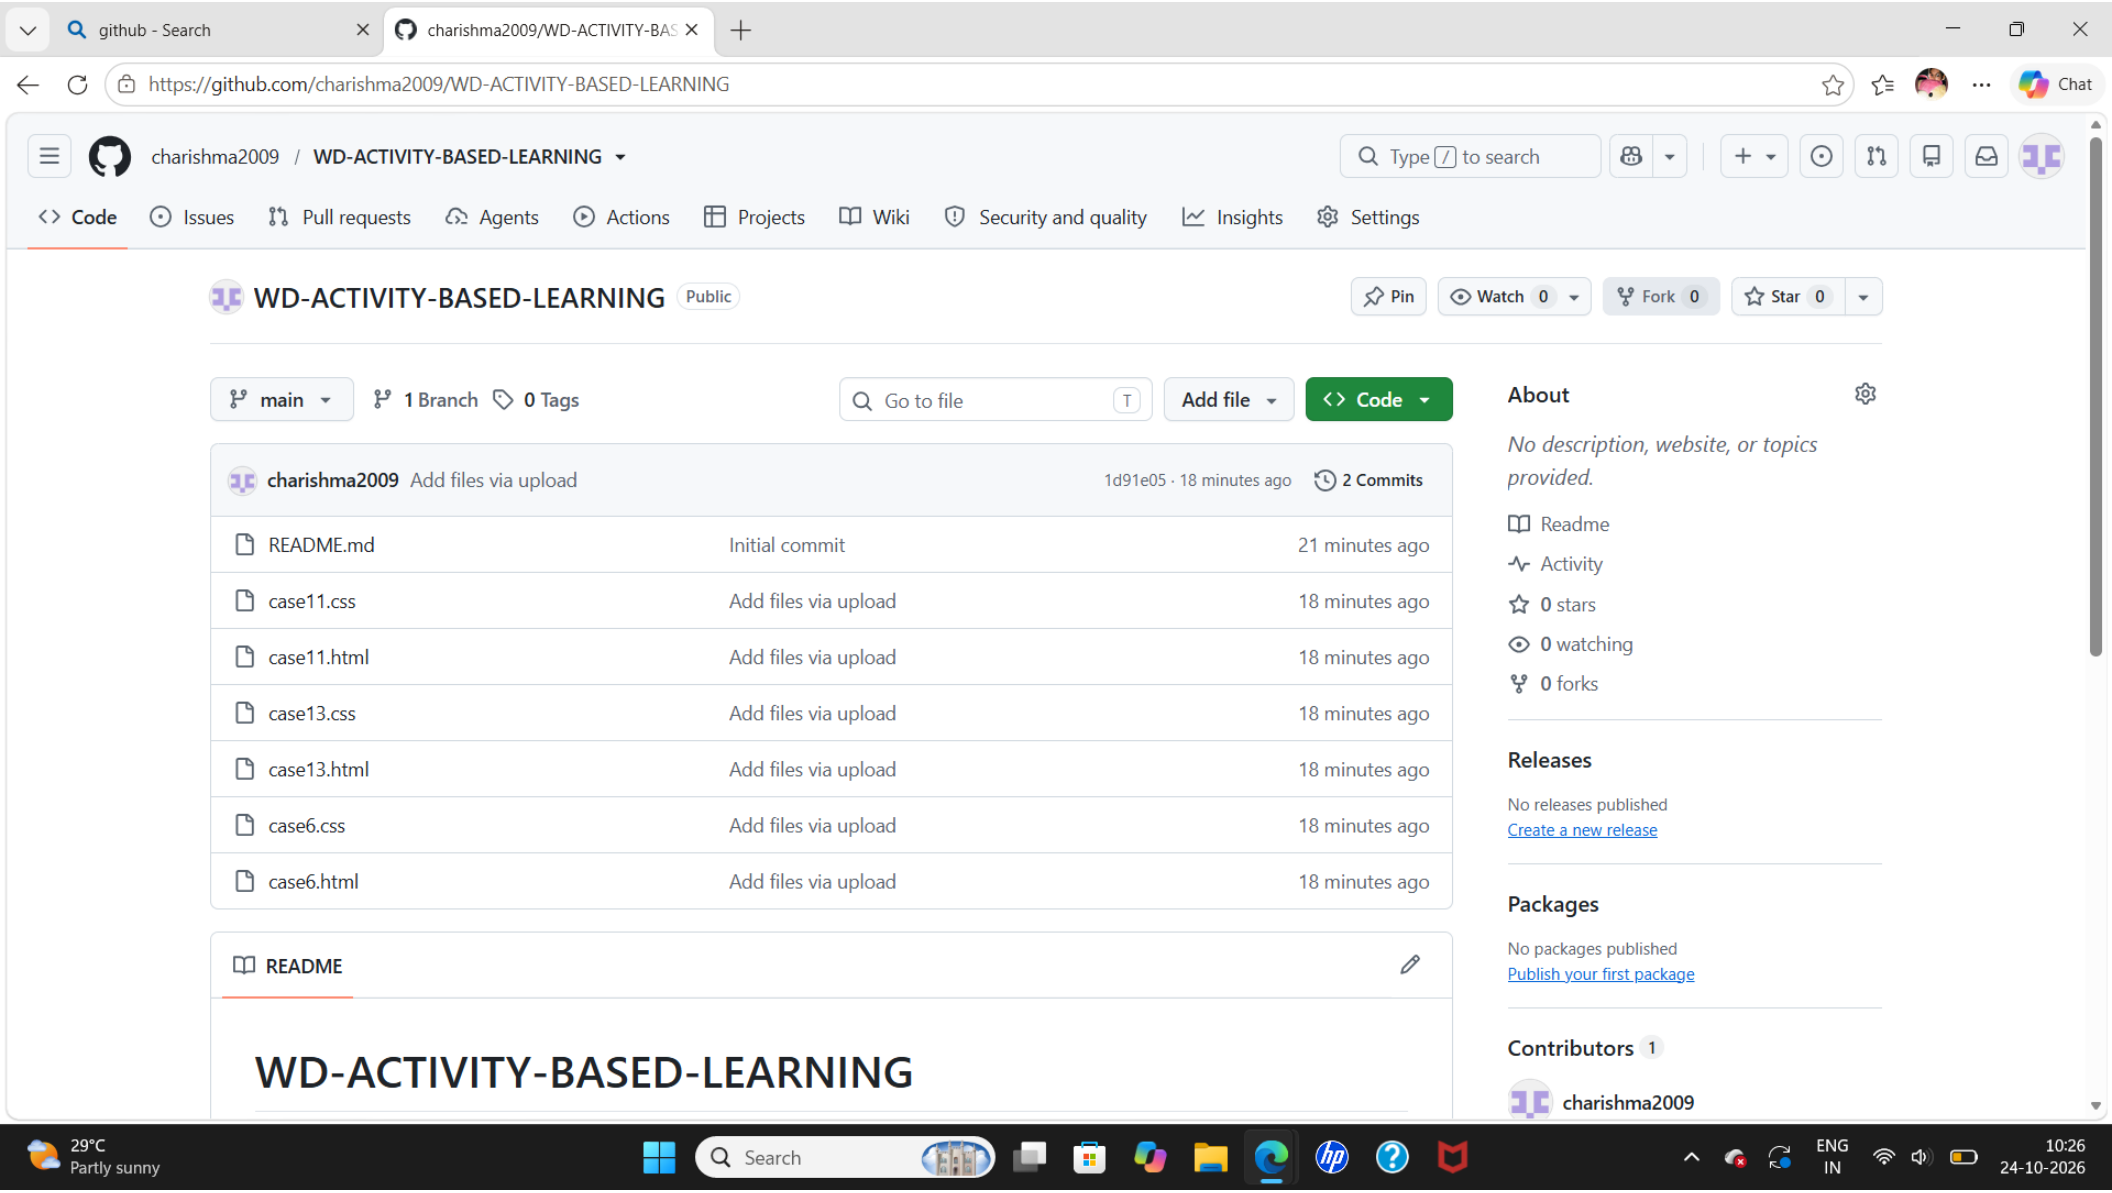

Main Features

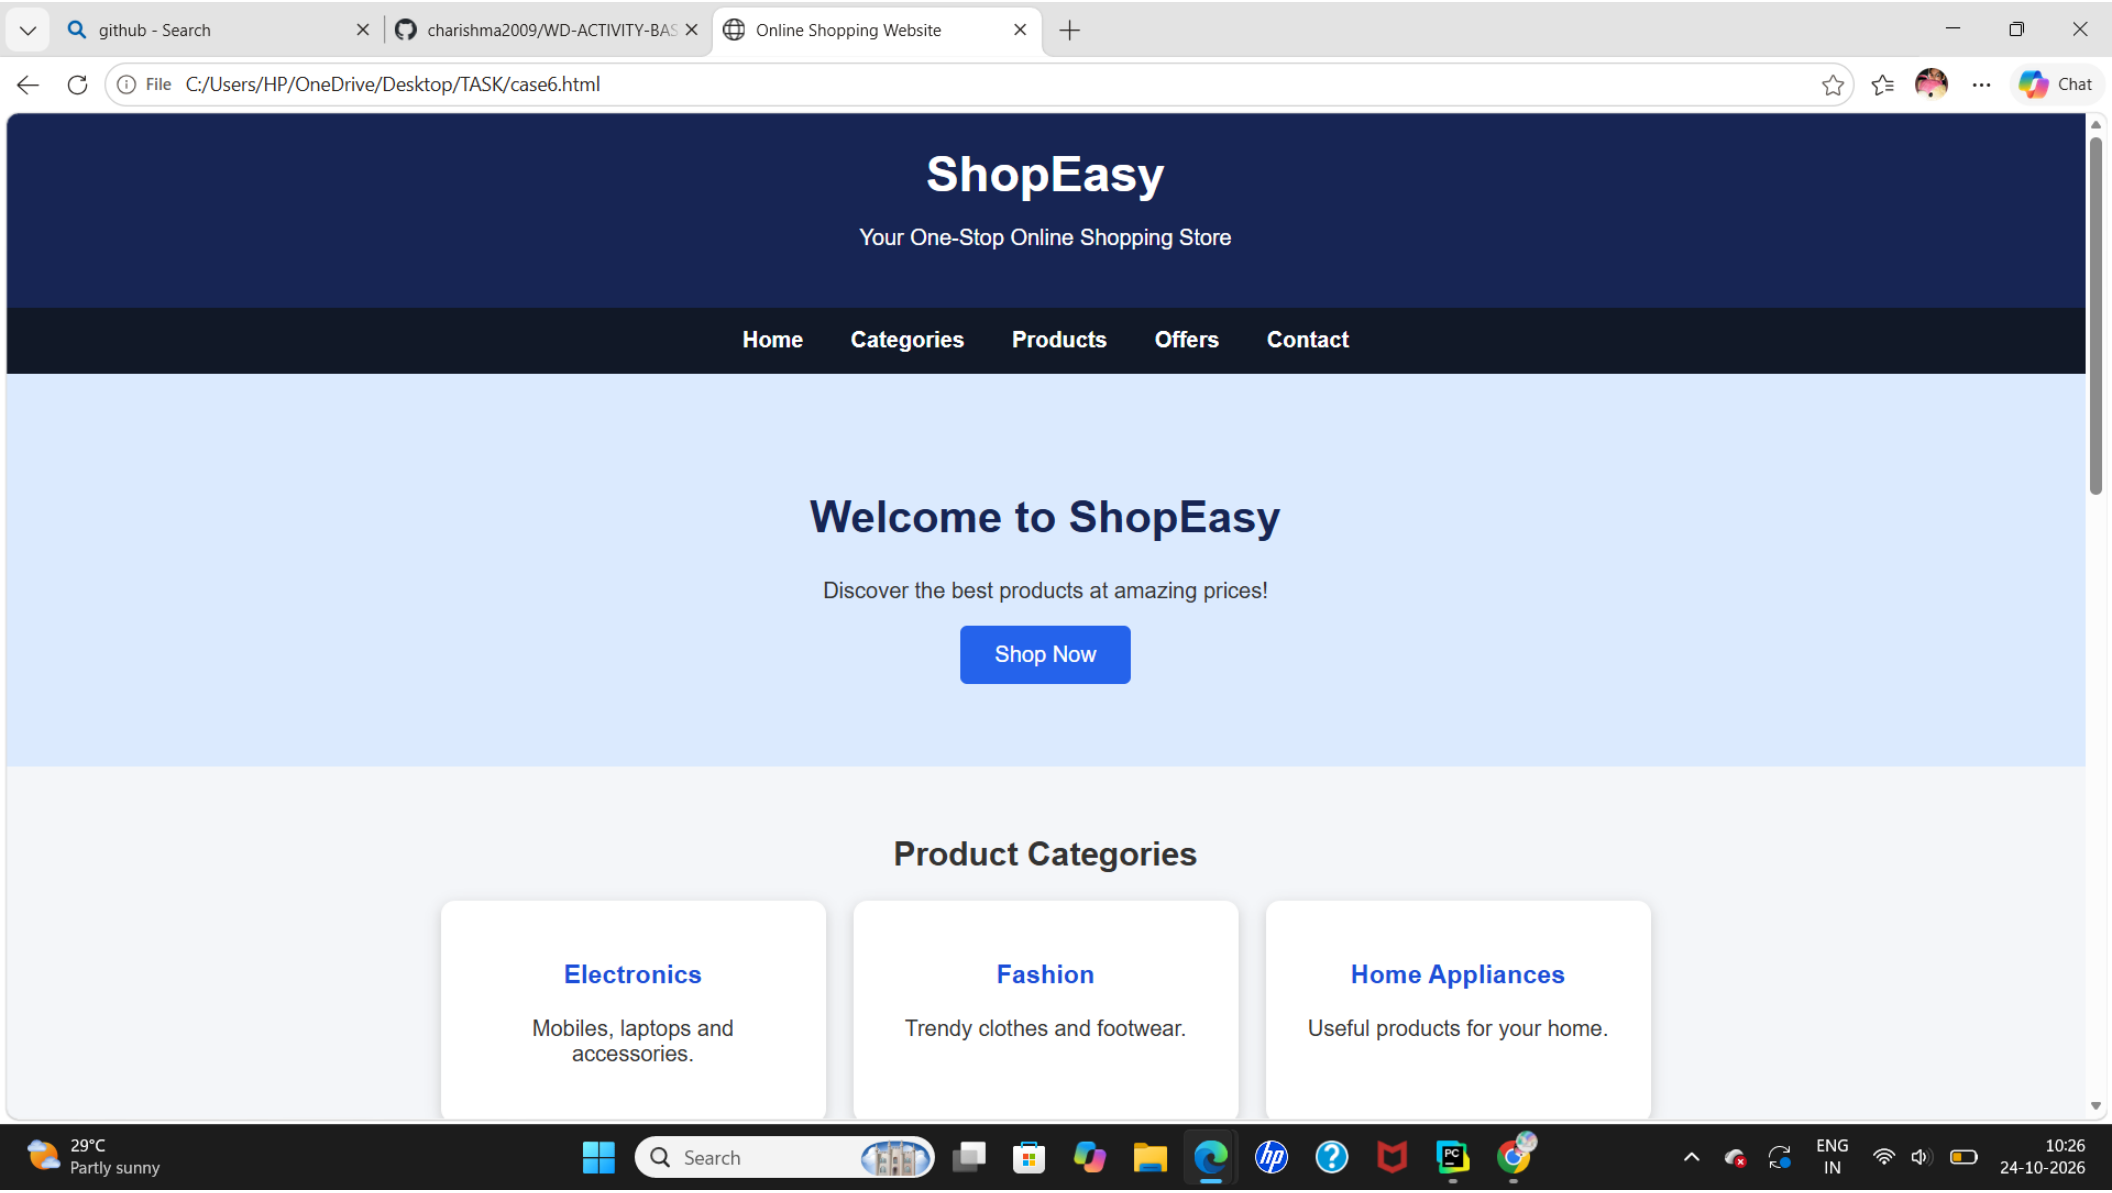

- Gym branding, motivational tagline, and navigation links.
- Welcome section with a “Join Our Gym” button.
- Workout program cards for cardio, strength training, yoga and flexibility, and group fitness.
- Trainer cards with roles and experience.
- Class schedule table with class times and days.
- Membership plans with monthly prices and included benefits.
- Gym registration form and contact information.

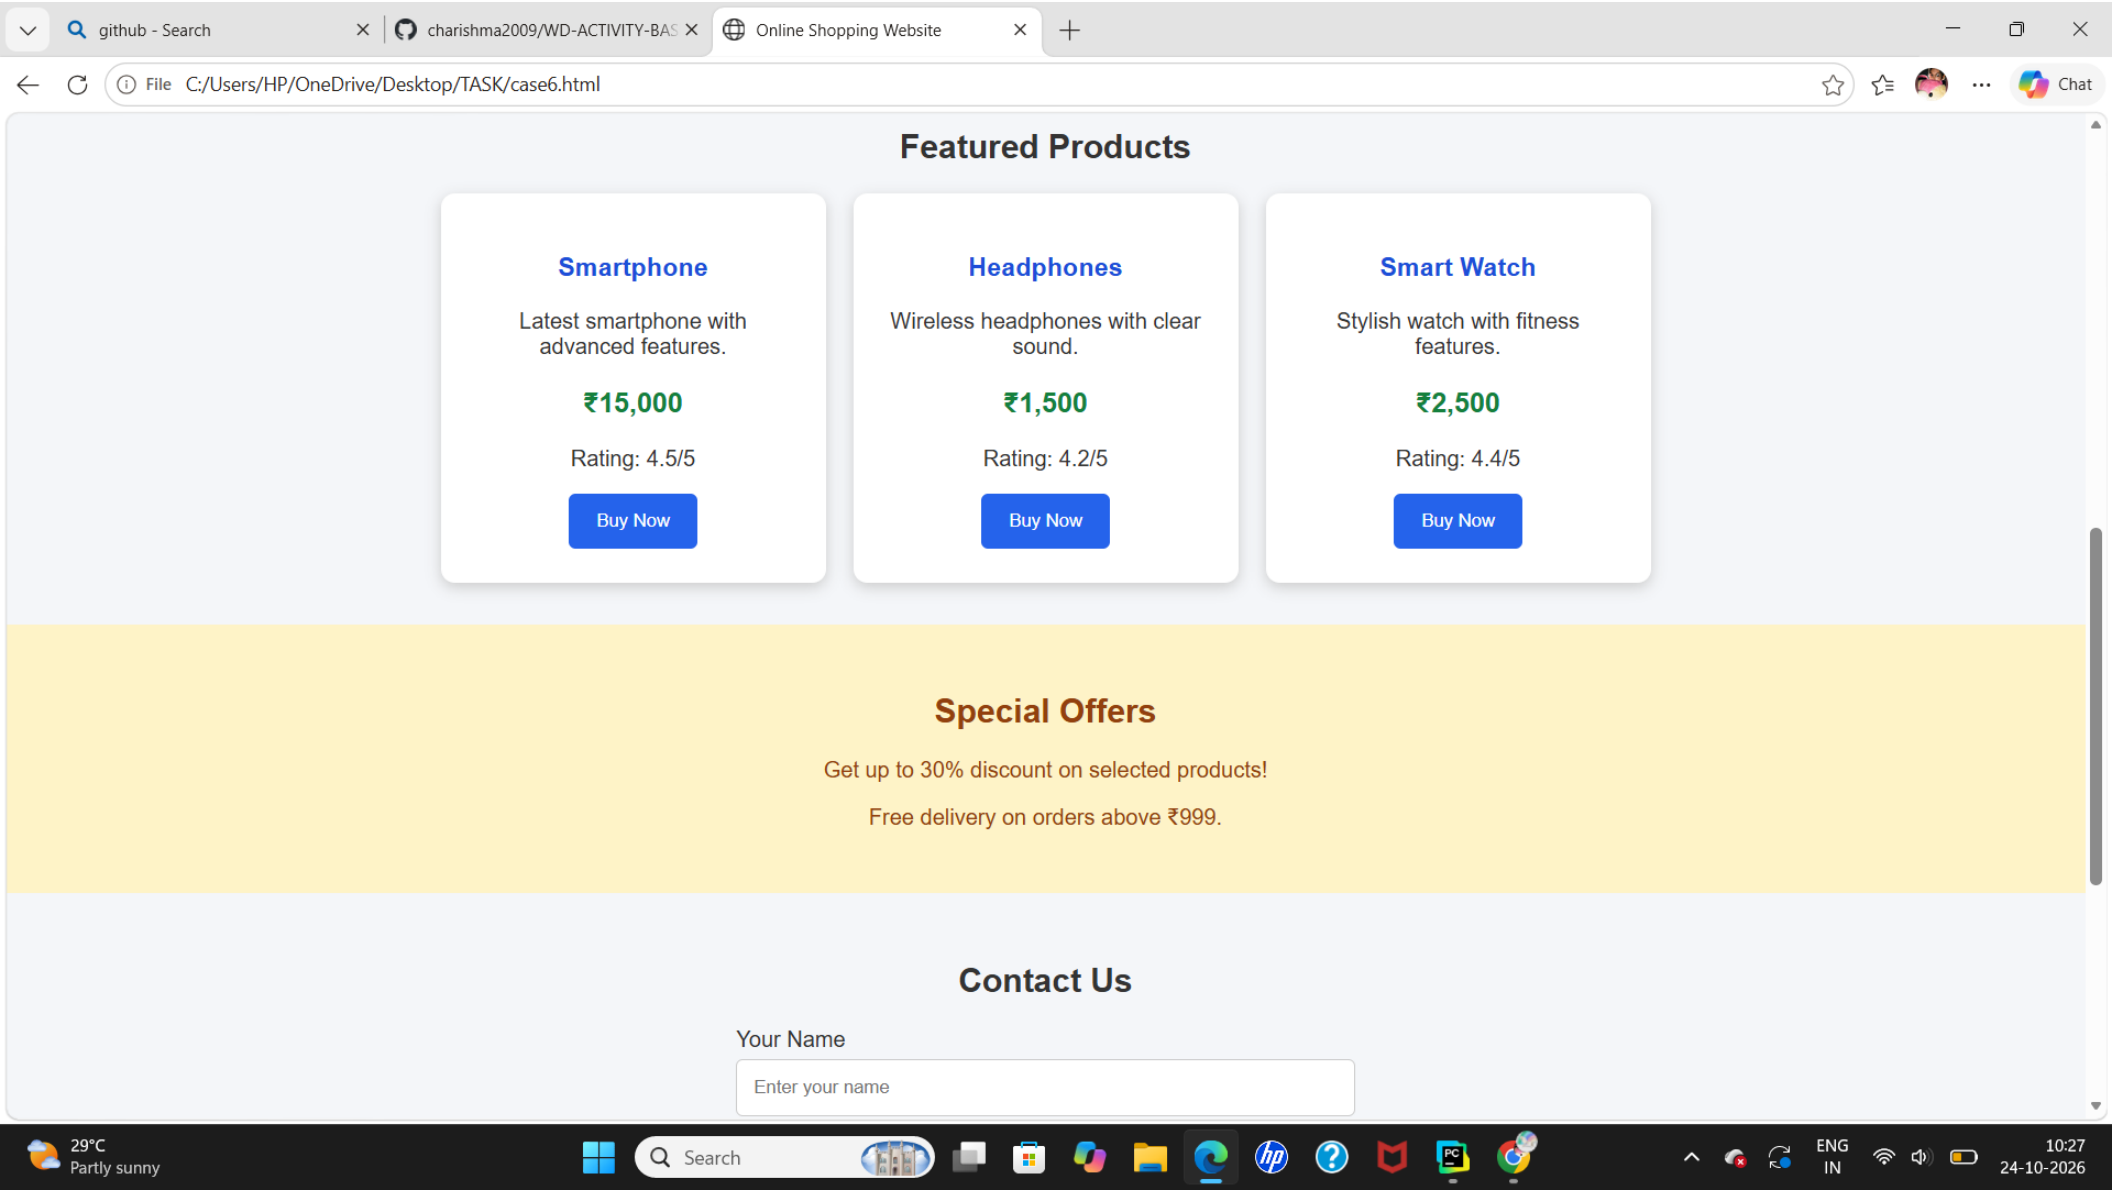

5. Conclusion

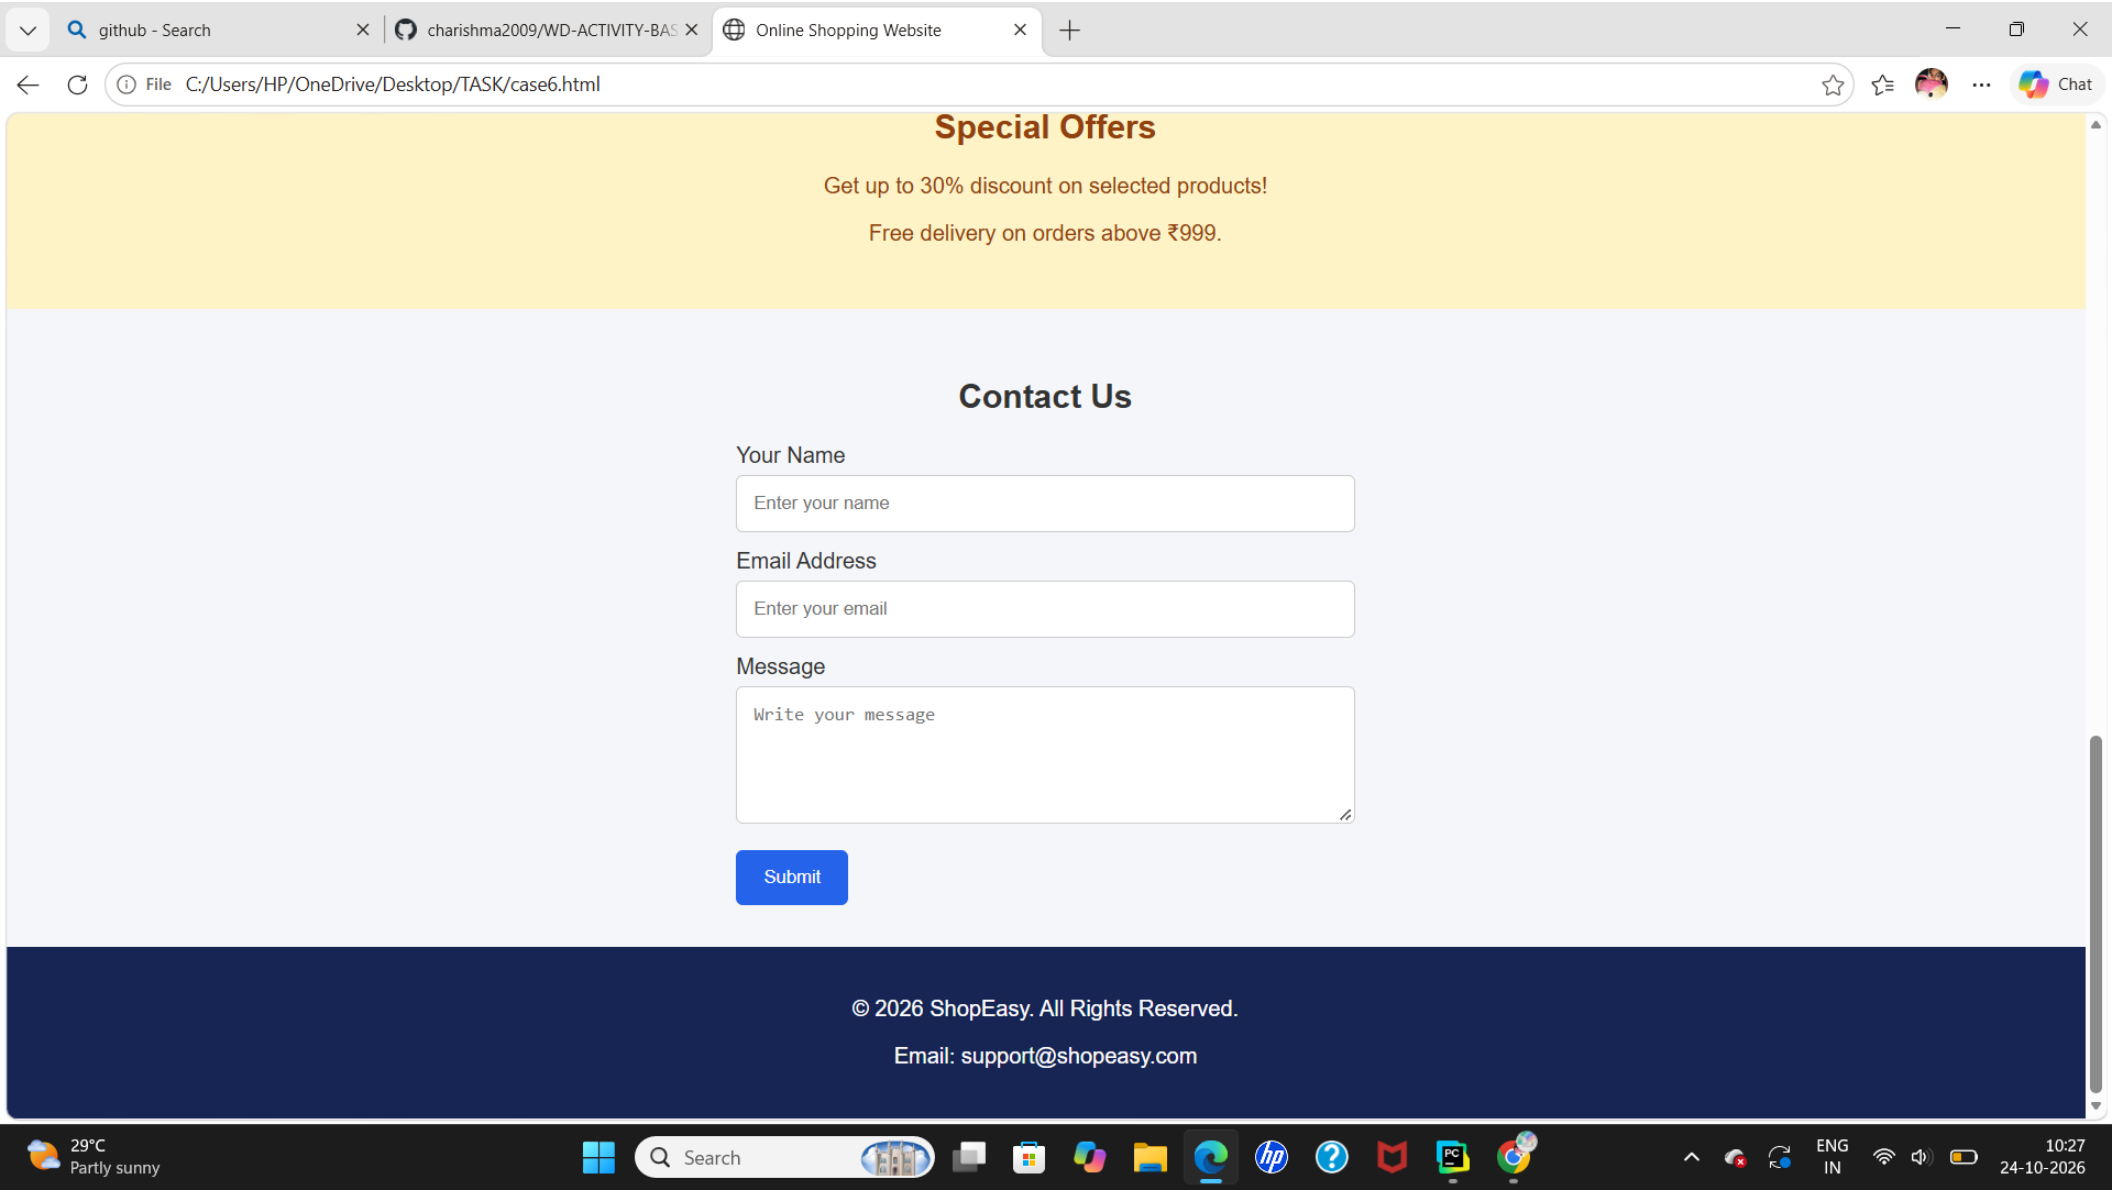

The three projects demonstrate how HTML and CSS can be used to create websites for different domains: e-commerce, healthcare, and fitness. They apply common web design patterns such as navigation bars, hero sections, cards, tables, buttons, and forms. The screenshots that follow serve as visual documentation of the rendered pages. Together, the written descriptions and screenshots form a consolidated project report.

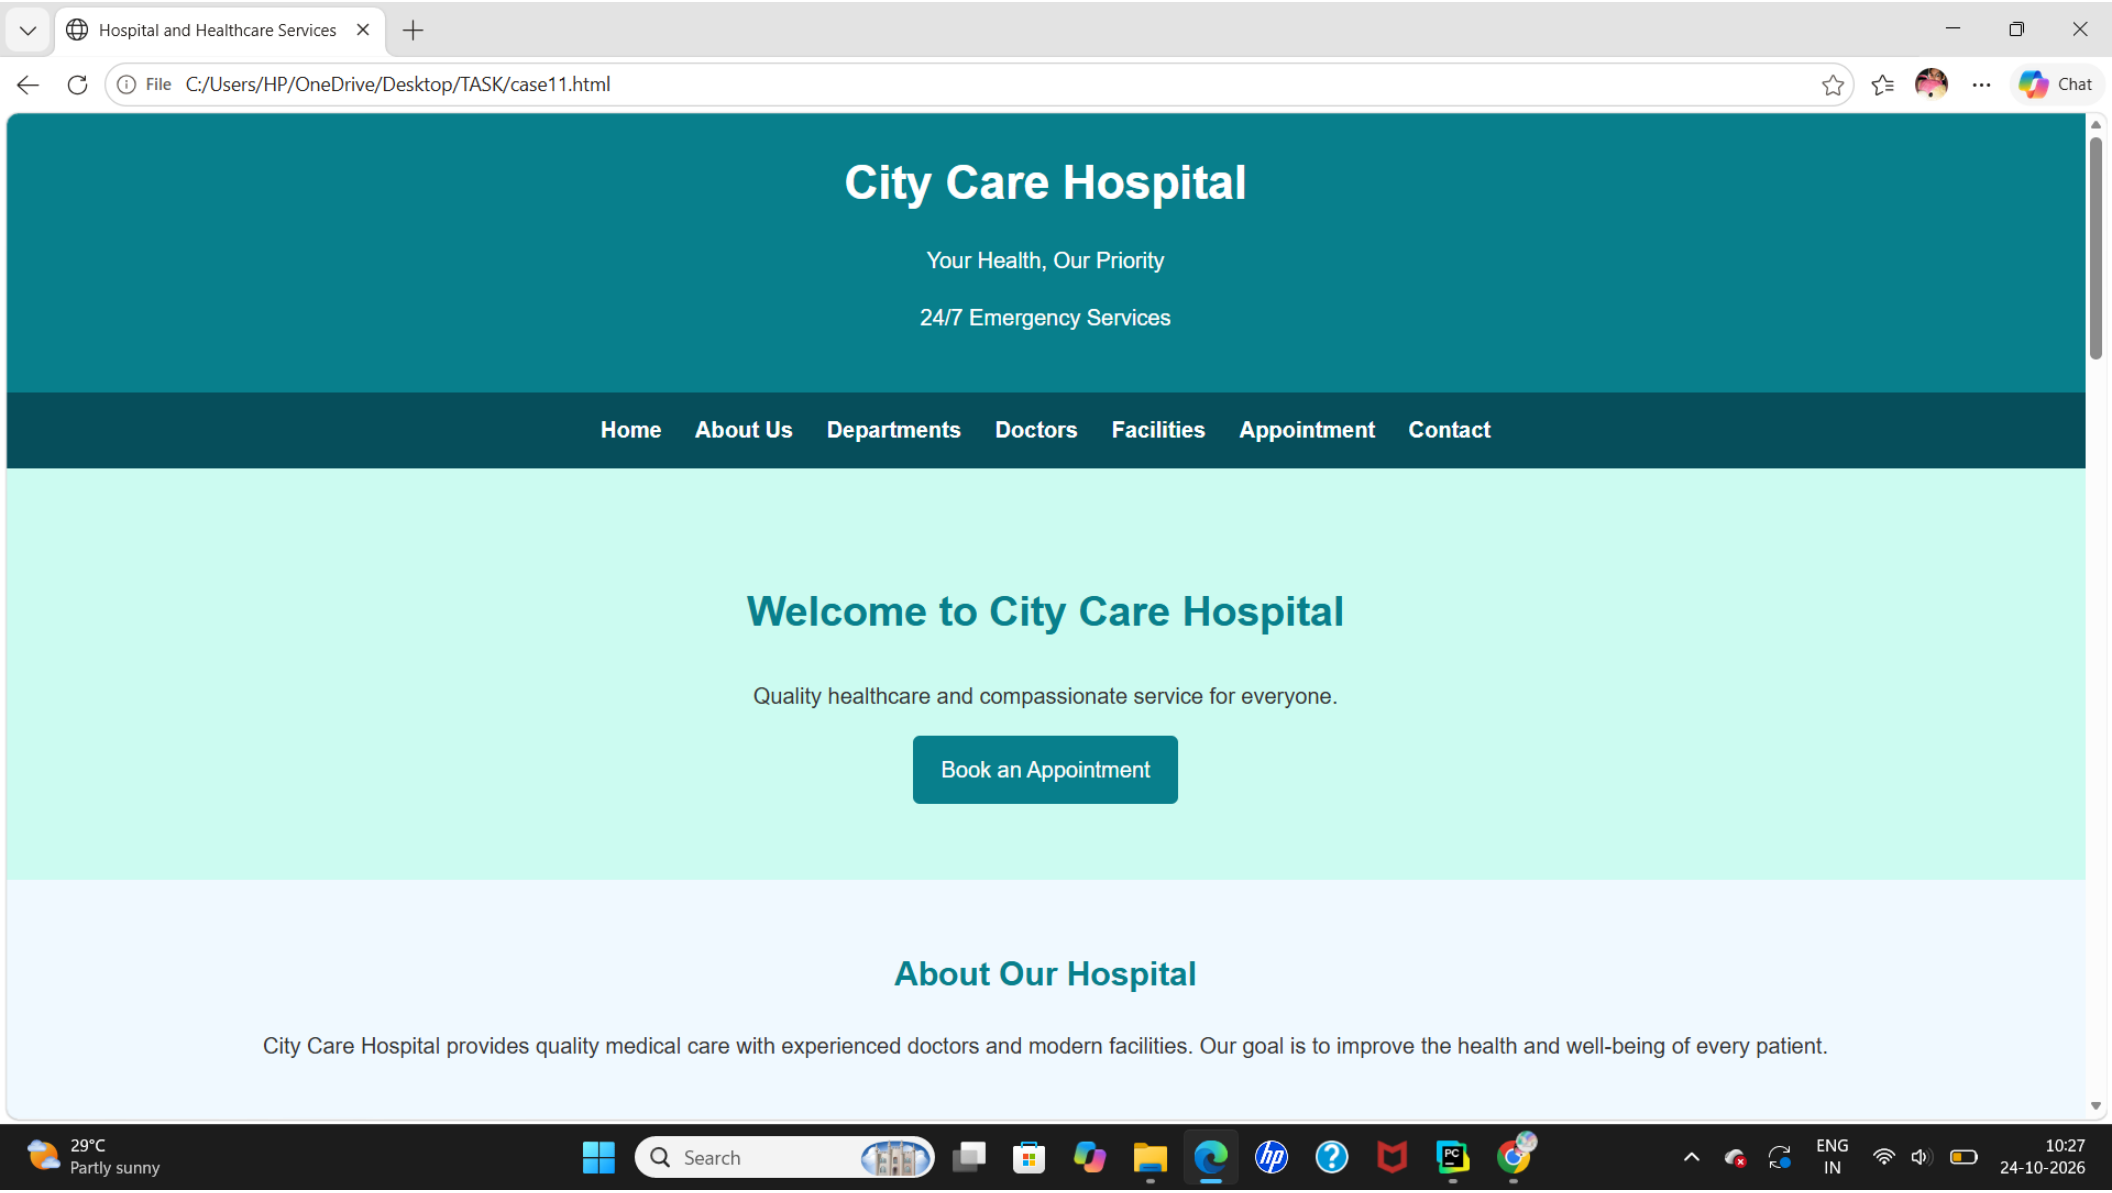

Note: The websites and contact details shown are sample/demo content for learning purposes.
